

Lily Upskilling Academy

When a Bustler adds a skill in the Bustler app by selecting the category and entering the skill name, and then clicks the "Verify Skill" button, they are redirected to Lily Upskilling Academy. The selected category and skill are automatically passed from the Bustler app to the website and pre-filled in the verification form. The user can choose between AI verification and certificate verification.

Bustler Login

- Login using Bustler account
- No separate registration
- Sync profile from Bustler

Dashboard

Every Bustler gets a professional dashboard.

- Notifications
- Ai recommendation (Future)

Skill Management

Users can

- Add Skill
- Remove Skill
- View Skills

AI Skill Verification

After selecting a skill, the Bustler chooses either the Beginner or Expert assessment level. The user then completes the AI-based assessment, where their responses are evaluated automatically. Upon successfully achieving the required passing score, the user is awarded the AI Skill Verified badge, which is displayed on both the Lily Upskilling Academy website and their Bustler profile.

Beginner- 5 basic questions

Expert- 15 advanced Questions

Badge- AI Skill Verified

Certificate Verification

Users can upload their certificates in PDF or image format as proof of their skills. The uploaded certificates are sent for manual review by employees. Once successfully verified, the user is awarded the Certification Verified badge, which is displayed on both the Lily Upskilling Academy website and their Bustler profile.

Badge System

Every skill has its own badges.

Example:

Electrician- AI Skill Verified, Certification Verified

Another skill:

Plumbing- AI Skill Verified

Customer View

Customers can view the verification status of each skill directly from a Bustler's profile. By selecting View Verification for a specific skill, such as Electrician, they can access detailed information including the assessment score, verified certificate, verification date, and unique verification ID, allowing them to confirm the authenticity and credibility of the Bustler's verified skills before hiring.

Fully Verified Bustler Badge

The Fully Verified Bustler badge is awarded when all the skills listed on a Bustler's profile have successfully completed the required verification processes, including AI Skill Verification and Certificate Verification (where applicable). This badge signifies that the Bustler has fully verified all of their registered skills, providing customers with a higher level of trust and credibility.

AI Learning Recommendations (Future)

If user fails AI recommends:

- Courses
- Practice Questions

Analytics Dashboard

Show:

- Skills Verified
- Average Score
- Learning Progress
- Certificates
- Badge Collection

Phase 2 (Future)

This phase starts after Lily Upskilling Academy partners with institutions.

The architecture from Phase 1 should already include placeholders (database tables, APIs, UI hooks) so this feature can be added without redesigning the system.

Institution Verification

As a future enhancement, Lily Upskilling Academy plans to partner with recognized educational institutions and training organizations to provide Institution Verification. Bustlers will undergo a practical skill assessment conducted by a partner institution, and upon successful evaluation, the institution will approve the verification and award an Institution Verified badge. The badge will then be automatically synchronized with the Bustler profile, providing customers with an additional level of trust based on institution-backed skill validation.

Lily Upskilling Academy Admin Portal

Objective

Enable Bustler employees to:

- Manage skills and categories
- Review AI-generated assessments
- Verify certificates
- Resolve disputes
- Monitor analytics
- Manage badges
- Monitor fraud
- Support users

Admin Dashboard

The home page should give employees a quick overview of platform health.

- Settings

1. User Management

The User Management module allows employees to search and view any Bustler's profile. Employees can access details such as the Bustler's trust score, registered skills, verification status, assessment history, certificates, and badges, enabling them to effectively monitor user activity and manage verification records.

Actions

- View Profile
- Suspend
- Reset Assessment
- Remove Badge
- View History
- View Certificates

User Details

Employees can view

- Profile
- Skills
- Assessment History
- Certificates
- Badges
- Verification History
- Login History

2. Skill Management

Employees can

- Create
- Edit
- Delete
- Skills

If a user requests a new skill that is not available in the system, such as Solar Panel Installation, the request is submitted for employee review. Employees can evaluate the request and, if approved, add the new skill to the platform, making it available for future skill verification and assessments.

3. AI Assessment Management

The AI Assessment Management module enables employees to monitor all AI-based skill assessments. Employees can view assessment details such as the skill, difficulty level, questions attempted, score, duration, and pass/fail status. The module also provides performance analytics, including pass rate, average score, and total assessment attempts for each skill, helping employees evaluate assessment effectiveness and identify areas for improvement. Employees can also approve assessment retakes for valid reasons, reset attempts in cases of technical issues, and review suspicious assessment attempts to ensure the fairness and integrity of the verification process.

4. Certificate Verification Center

The Certificate Verification Center allows employees to review and manage all uploaded certificates. The dashboard displays pending certificate requests along with details such as the user's name, skill, issuing organization, and AI confidence score. Employees can view the certificate, extracted

information (name, skill, organization, certificate ID), AI confidence score, duplicate check results, and tampering analysis before taking actions such as Approve, Reject, Request Re-upload, or Add Comments. Certificates with a high AI confidence score (e.g., 98%) are automatically verified, with employees performing only random audits. Certificates with medium confidence (e.g., 86%) require manual review, while those with low confidence (e.g., 52%) are flagged for further investigation to prevent fraudulent submissions.

5. Badge Management

Employees can view and search all issued badges to access details such as the recipient, associated skill, date of issuance, and current verification status. They can also revoke badges if fraudulent activity is detected, reissue badges after successful re-verification, and handle badge-related appeals to maintain the integrity and credibility of the verification system.

6. Analytics Dashboard

This is the business intelligence centre.

Charts- Users Monthly Growth

Assessments-Pass Rate

Popular Skills-Top 10

Average Scores- Per Category

Certificates-Verified, Rejected, Pending

Badge Distribution- How many, Certification, Fully Verified

7. Fraud Detection Dashboard

Shows:

- Duplicate Certificates
- Suspicious Uploads
- Multiple Accounts
- Repeated Failed Attempts
- Fake Certificates
- Edited Documents

Employees can investigate suspicious activities, approve or reject verification requests, and suspend user accounts when fraudulent or policy-violating activities are identified.

8. Support Center

The Support Center enables Bustler employees to manage and resolve user issues efficiently. It displays support tickets with details such as the user's name, issue, status, and priority. Employees can view each request, communicate with the user, and take actions such as Reply, Close or Escalate the ticket to ensure timely issue resolution.

9. Reports

Can download and see:

- Daily Report
- Weekly Report
- Monthly Report

- Certificate Report
- Verification Report
- User Activity
- Fraud Report

10. Notifications

Employees receive alerts such as:

- 20 new certificates awaiting review.
- New skill request submitted.
- AI confidence below 70%.
- Potential duplicate certificate detected.
- User appealed badge rejection.

11. Audit Logs

Audit Logs: Every employee action, such as approving certificates, rejecting requests, or updating user records, is recorded with details including the employee's name, action performed, affected user, and timestamp. This ensures accountability, transparency, and complete traceability of all administrative activities.

Employee Roles: The system implements role-based access control, ensuring that employees have permissions based on their responsibilities. For example, administrators have full system access, while verification officers, support executives, and content managers can only access the modules relevant to their assigned roles.
